# Identity Based Storage Management Solution

Every decision you make about giving people access to your business, and every effort you make to deliver services or content to people, is based on identity. You can't deliver resources to people-or effectively manage access to those resources-unless you know who they are, how they relate to your business, and what they need from you. Novell Secure Identity Management places a robust identity and access management foundation at the heart of your IT infrastructure. This foundation unifies identity information and policies across all the different systems in your organization. It safeguards your resources from intruders and it allows you to present your customers, partners, and employees with a dynamic combination of information, resources, and processes-all based on their relationship with your business.

Regulatory compliance and business needs are now driving company's to implement automated and identity based storage solutions based on an individual's role within the company. This data needs to be provisioned, managed and de-provisioned as part of your companies overall secure identity management solution. Providing this level of service for identity based storage requires a solution that unites the users' identity with their personal and group storage needs. Novell File System Factory provides this solution by uniting Netware storage services with Novell Secure Identity Management.

Novell File System Factory is a key component of the Identity Based Storage Management solution. File System Factory provides new and dynamic levels of automation and management for NetWare file services, which to this point have not been possible. File System Factory enables policy-based lifecycle provisioning and de-provisioning of personal and group storage. As a result, your business can simplify access and management of storage, based on users' identities. In addition, Condrey Consulting Corporation's IUAdmin and AuditLogin products further enhance the Identity Based Storage Management solution by providing web based access and management of storage from any web browser, self service password reset, help desk features as well auditing reports on who is logging in and accessing storage resources. Identity Based Storage Management allows your business to effortlessly keep pace with the storage demands of a busy, large-scale organization and reduce support costs.

Your company will recognize the following benefits from the proposed solution:

- Lets you provision and de-provision user personal and group storage based on identity
- Lets you gain control of storage management by implementing role based storage policies
- The Executive Storage Dashboard allows you to monitor trends on allocation, growth and clean up of policy managed storage so you can make informed decisions
- The Rights Analysis component helps insure that only appropriate users have rights to storage
- Reduces the costs of creating, managing, migrating and cleaning up storage
- Identity based group storage allows you to automatically create and manage storage based on departmental workgroup needs
- Automatic data migration of employee data when they move between locations or departments maintains their personal data and reduces the burden on IT resources
- Automatic storage clean up allows you to reduce cost associated with cleaning up storage after an employee leaves the company and frees valuable disk space for new users
- The Employee Data Manager Workflow component allows a manager to review, reassign or vault data prior to deletion
- Leverages your investment in the existing Netware and eDirectory infrastructure
- The IUAdmin Resource Portal provides employee's web based access to Identity Based storage and resources from any web browser as well as self service password reset
- AuditLogin provides reports and graphs of user login and logout activity
- The ability to implement the solution into existing networks keeps hardware and implementation cost low.
